

*SolveITLabs is the global IT services company qualified to build, integrate and support professional business applications. For over 15 years, we create solutions that effectively meet the business requirements of organizations in all facets of the healthcare industry.*

## We Understand Innovation

Healthcare providers are under pressure to deliver high quality products and services, reduce healthcare costs to patients and insurance carriers, and to continually invest in the latest medical technology. *SolveITLabs's* consultants understand the demands placed on healthcare providers.

We understand the need for solid back-of-face systems and processes, and the importance of effective interaction with both the organizations that facilitate payment for patient care and the life sciences companies that provide state-of-the-art products.

We can help make back-office implementation as cost-effective as possible, so that providers can focus on what matters most – delivering the highest quality care to patients.

We have an extensive track record of helping companies better leverage their investments in technology and improve their business processes.

*SolveITLabs* works with the distinct requirements of insurance companies and managed care providers to build flexible, robust financial systems that meet their unique needs.

## What We Can Do for You?
